Retina

Denise Goodwin, O.D., F.A.A.O.
Pacific University College of Optometry

1

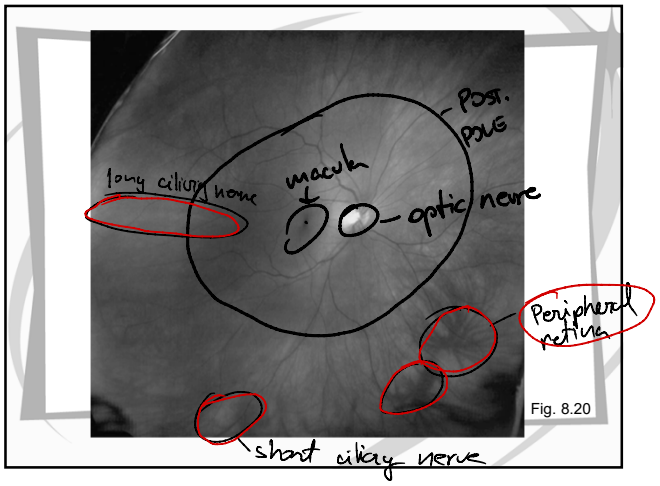

Fig. 8.20

2

- FOVEA

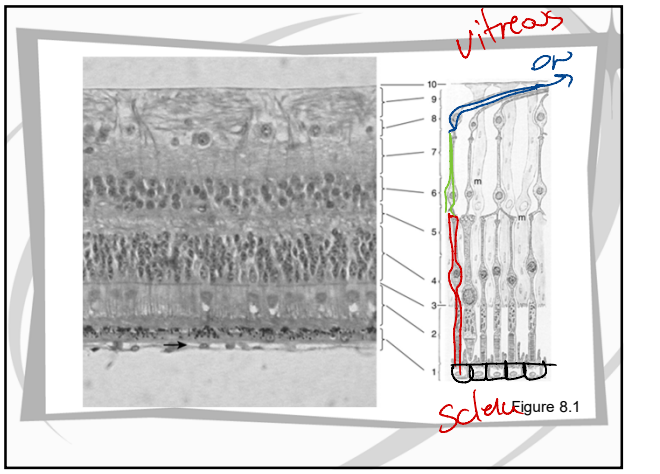

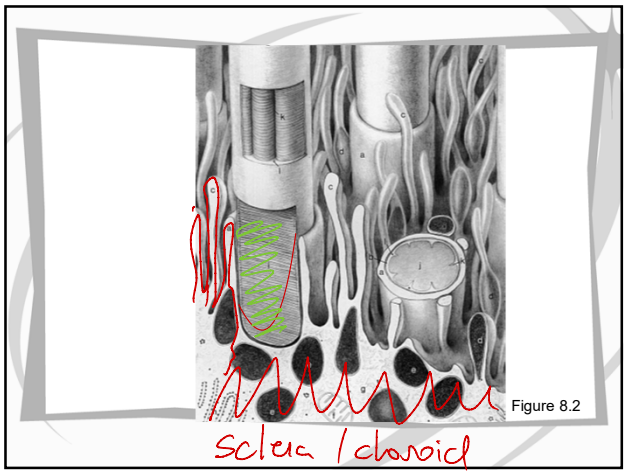

Figure 8.1

3

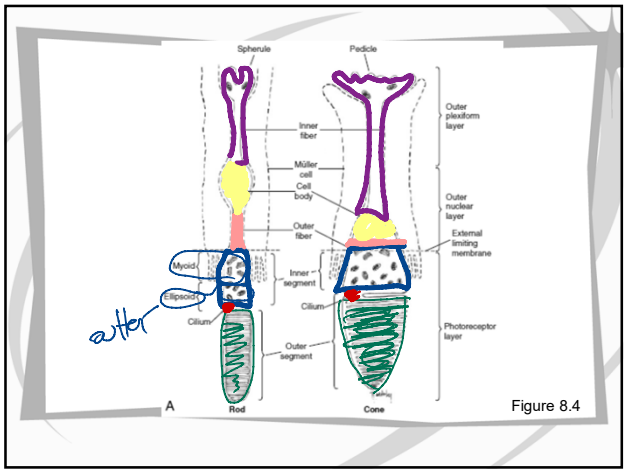

- first cell
- ganglion cells → form eye to brain
- RPE

4

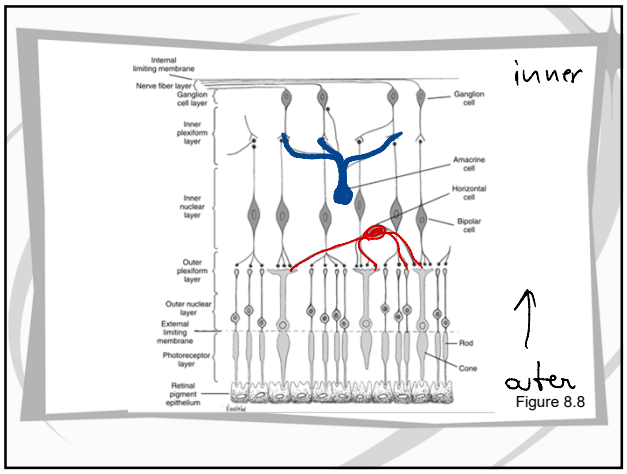

photoreceptor

RPE

5

- connective stalk
- outer fiber
- contain DNA & everything that is produced + nukleus
- inner fiber

6

25-80 photoreceptor for 1 horizontal cell

- Amacrine cells

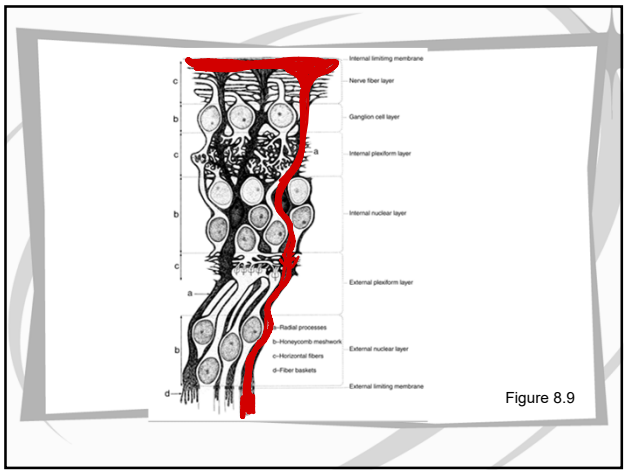

Figure 8.9

7

Müller cells supporting every single cell in retina

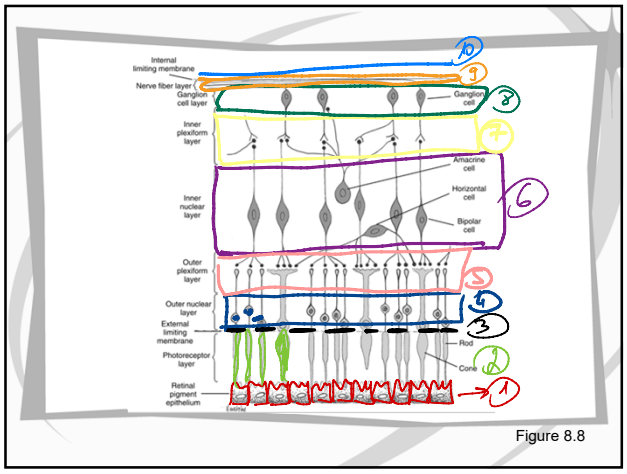

Figure 8.8

8

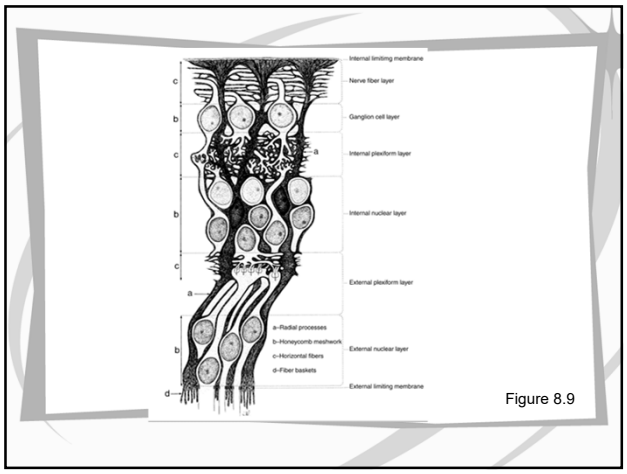

Figure 8.9

9

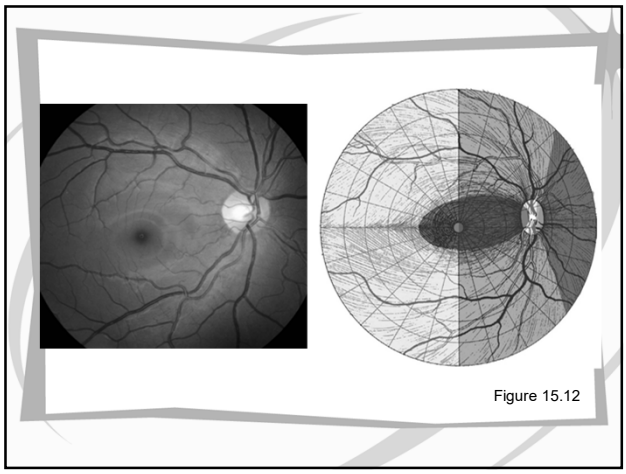

Figure 15.12

10

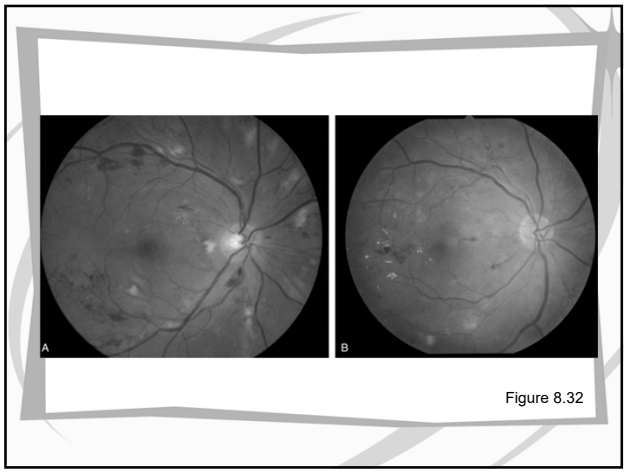

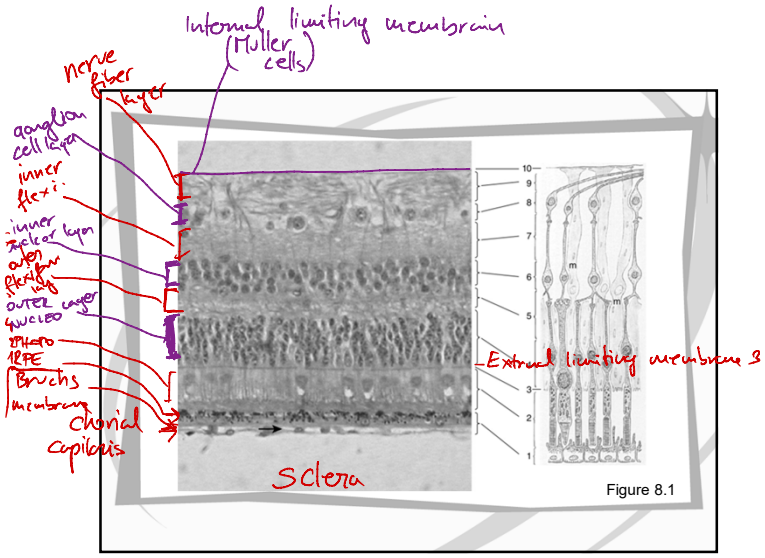

Figure 8.32

11

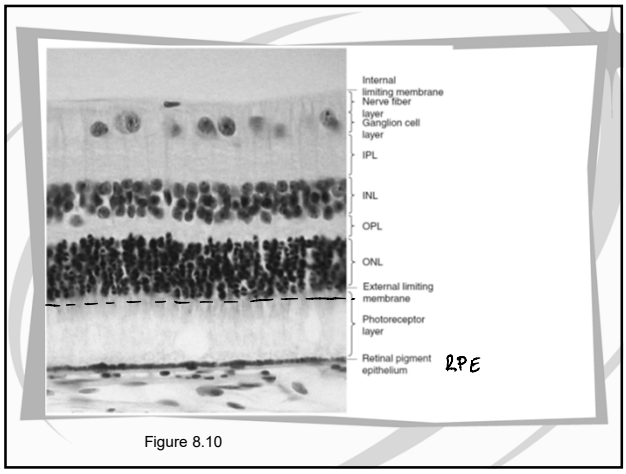

Figure 8.12

12

13

- cell bodies

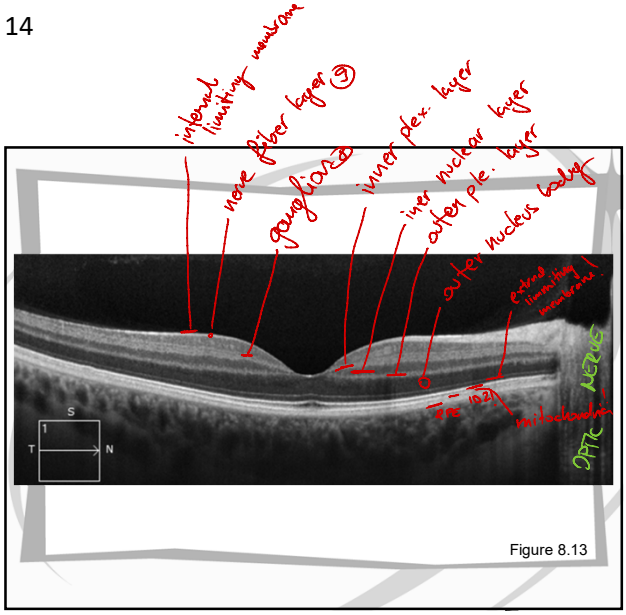

14

outer nucler layer - ONL

outer plexi layer - OPN

internal nuclear layer - INL

15

Synapses = ligluten

nucleus = Lorber

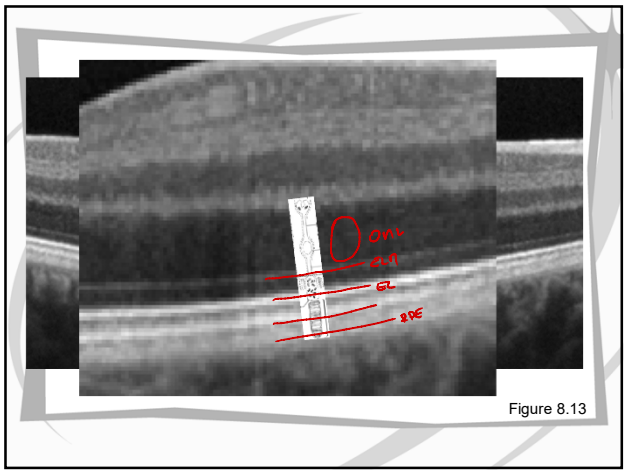

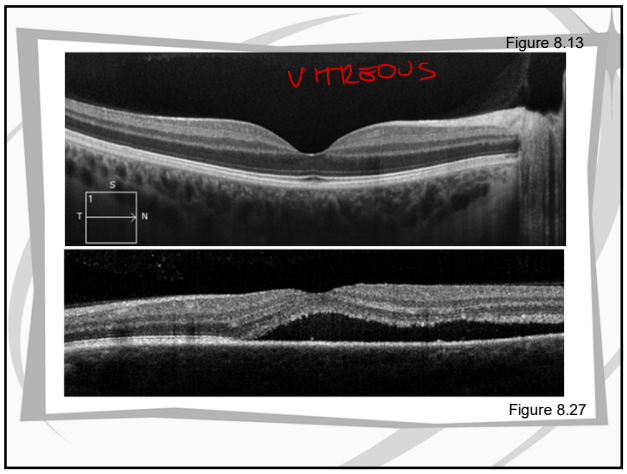

Figure 8.13

16

17

Different type of edema can occur

18

Figure 8.12

19

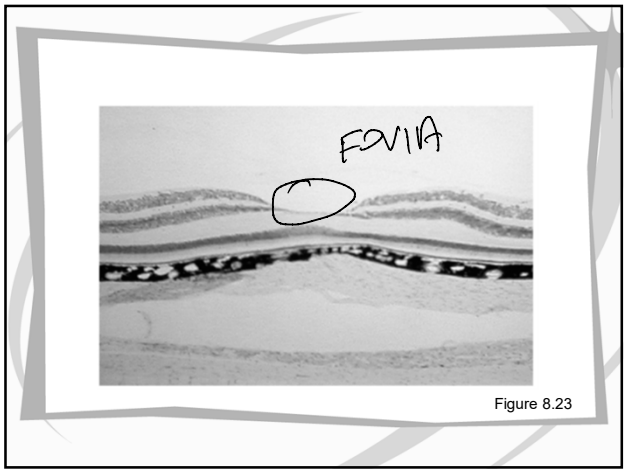

Figure 8.23

20

OTC A

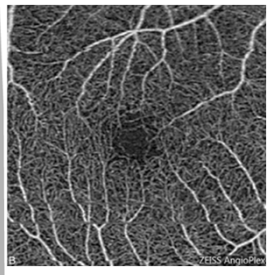

Figure 8.22

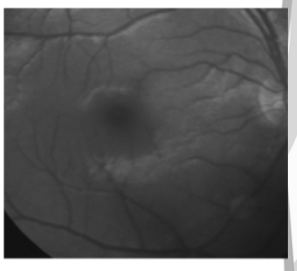

Figure 8.12

21

No blood vessels there

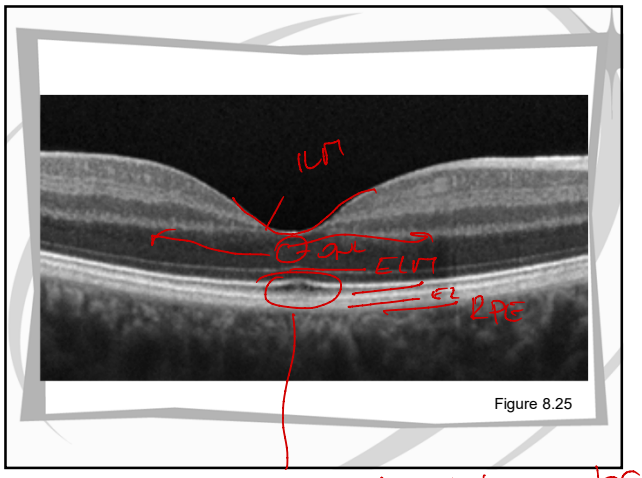

Figure 8.25

22

Squeezed photoreceptor

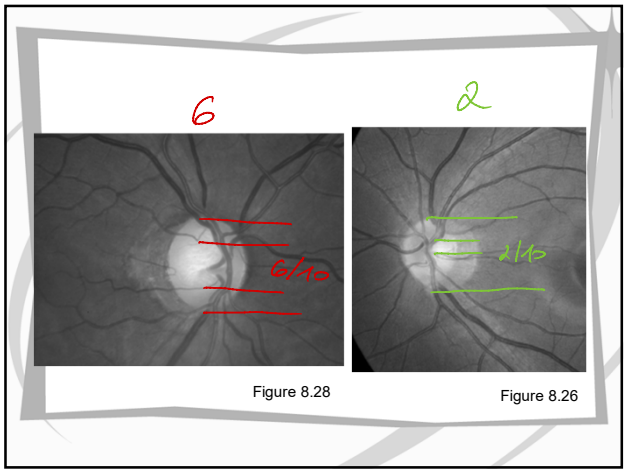

Figure 8.28

Figure 8.26

23

cup size to nerve
Have to watch is not getting bigger

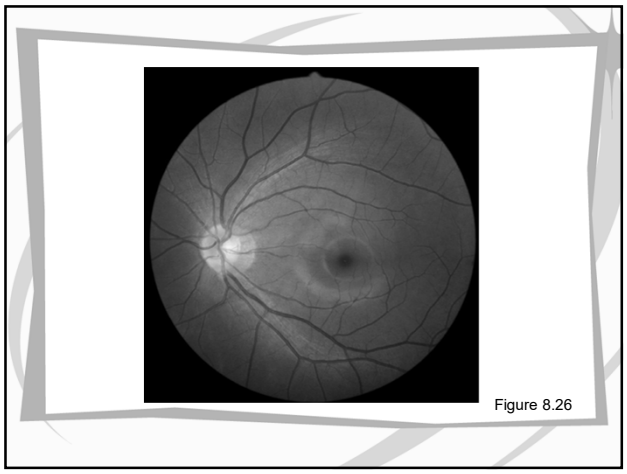

Figure 8.26

24

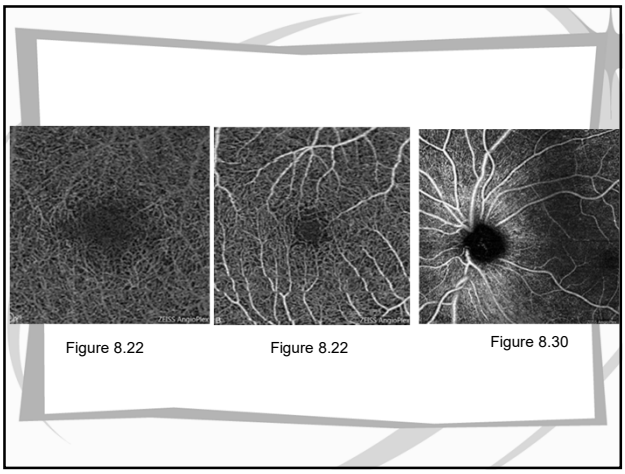

Figure 8.22 Figure 8.22 Figure 8.30

25

No blood vessels in macula

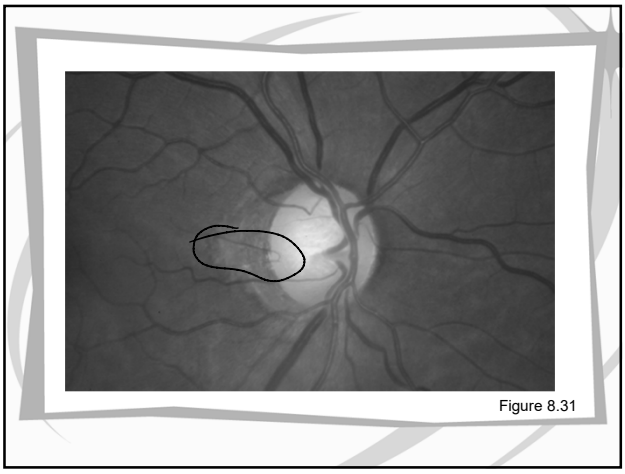

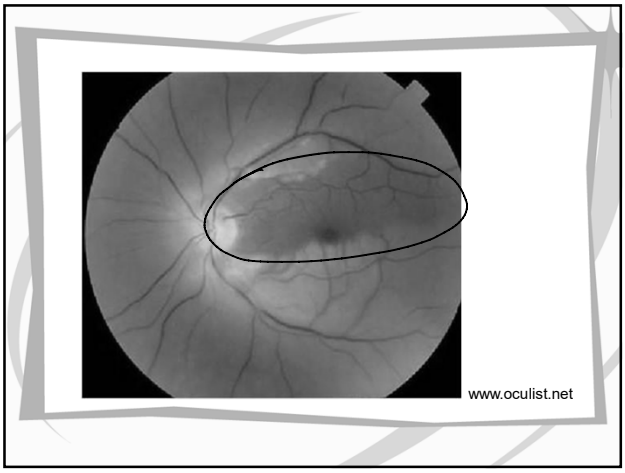

Figure 8.31
