Orbital Bones

Images used: 10.6, 10.17, 10.3, 10.5, 10.7, 10.9, 10.10, 10.11

I. Orbital bones Total of 7 BONES!

A. Orbital walls

1. Roof

a. Bones

(1) Frontal bone

(2) Lesser wing of the sphenoid bone

looks like butterfly and the smaller one is lesser wing

b. Landmarks

(1) Fossa for the lacrimal gland

deep on the bone

(2) Trochlea super orbital muscle

(3) Supraorbital notch supraorbital nerve + vessels

(4) Supratrochlear notch supratrochlear nerve + vessel

2. Floor

a. Bones

(1) Maxillary bone — medial

(2) Zygomatic bone — lateral

(3) Palatine bone — posterior

b. Landmarks

(1) Inferior orbital fissure — separation between floor and lat. wall

(2) Infraorbital groove — torn into canal

(3) Infraorbital foramen — torus into — infraorbital nerve

is the thing going from groove to canal to foramen (sensory nerve, upper check and lid)

(4) Clinical correlate: Blow-out fracture

3. Lateral wall - strongest one (trauma, hit, ...)

a. Bones

(1) Zygomatic bone

(2) Greater wing of the sphenoid bone

b. Landmarks

(1) Superior orbital fissure between LW + GR
CRENIAL NERVE (CN) 3, 4, 5, 6

(2) Inferior orbital fissure

4. Medial wall 4 bones

a. Bones

(1) Maxilla

(2) Lacrimal bone

(3) Orbital plate of the ethmoid bone

the thinnest bone of our orbits (not the largest)

(4) Body of the sphenoid bone

i. Optic canal

b. Landmarks

(1) Fossa for the lacrimal sac
